

SkinObsession

GUIDE TO SUNLESS TANNING

- Exfoliate with our Pre-Party Scrub or other appropriate product the day you tan. Removing loose, dead, dry skin cells will improve and extend your tanning results.
- Moisturize thoroughly, especially any dry areas such as knees and elbows.
- Your skin should be clean and dry with no soap residue to interfere with your tan. Avoid bar soap.
- Shave or wax 24 hours before tanning.
- Apply minimal deodorant/perfumes/make-up or remove before your appointment. Your technician will provide you with face wipes.
- Select a dark bathing suit or underwear to wear while being sprayed, though female clients may opt for no tan lines. Also remember to bring dark-colored, loose-fitting clothing and flip-flops to wear home.
- After your tan, do not apply deodorant or moisturizing agents for 3-4 hours. Although the likelihood for an allergic reaction is very small, a patch test is recommended for persons who have a known sensitivity to sunless products or their ingredients (including fragrances).
- After all sunless treatments, wait at least eight hours before bathing or exercise to allow the DHA bronzer enough time to finish the reaction process.
- Keep moisturized and exfoliate gently after two days to prolong your tan. We recommend our Tan Extending Lotion for ultimate extending power.
